**V.**

The subject-matter of the current claims is neither disclosed in nor fairly derivable from the state of the art on record.

However, the following point arises.

Independent process claim 1 and independent apparatus claim 6 are not supported by the description in that they cover possibilities which would not lead to the solution of the problem at the basis of the invention.

More particularly, an essential feature of the invention would seem to reside in the grooves and/or the "teeth" of the anodes being sloped at a predetermined angle for the desired effect of rapid oxygen removal to be achieved. Attention is directed in this connection e.g. to present p.8, l.15-19 and 22-25 and to figs.1-3 and 5.

However, this feature, which is the only characteristic justifying the acknowledgment of an inventive step, is not specified in the independent claims but is only mentioned in subordinate claims 8 and 9.
